Cork and Axcient x360Recover API Integration

CORK™

x360Recover

Axcient and Cork have integrated to provide a better view of client environments for unobstructed insights that ensure business continuity and disaster recovery (BCDR). With integration through Axcient's public APIs, these products work together to support a clear understanding of what's happening when you might not be looking.

Cork + Axcient

Cork partners who connect x360Recover within the Cork platform can add another layer of visibility to each client's environment. Cork aggregates the data from multiple sources to build a unified client view. If Cork sees a server operating in its RMM or EDR platform but does not see that same server protected by Axcient, Cork will raise the issue for remediation.

What is Cork?

Cork is a cyber risk platform primarily designed for Managed Service Providers (MSPs) to offer their clients, especially small to medium-sized businesses (SMBs), protection against cyber threats. Cork focuses on bridging the gap between traditional cyber insurance and proactive risk management by offering cyber warranties.

The platform integrates seamlessly with an MSP's existing security stack, offering financial protection during a cyber-attack, including fast claim payouts and real-time monitoring. Cork's AI-enhanced risk model helps detect and mitigate threats, while its cyber warranty covers various cyber incidents like phishing, ransomware, business interruption, and even insurance deductibles. This makes it a comprehensive solution for businesses looking for both prevention and quick recovery from cyber incidents.

Cork's warranties differ from cyber insurance, which typically provides post-incident financial recovery by offering more immediate protection and financial relief for specific security risks. Additionally, Cork helps MSPs generate recurring revenue by bundling cyber warranties with their services.

How to Integrate Axcient Tools + Cork

The process can be simplified in three steps:

1. Generate an API key within the Axcient x360Recover portal.
2. Connect the API key to your Cork platform.
3. Map your Axcient clients to your Cork clients and begin checking for gaps.
